
a Model dependence and agreement
Attention knockout
Gradient-weighted rollout
Attention × gradient, means
Attention × gradient, sums
Last-layer attention
Rollout: group sums, group means, norm-weighted
Rollout minus the null
Agreement with counterfactual editing
Similarity to a random model's ranking
Knockout minus rollout: +0.74, Wilcoxon P < 0.001
b The structural null
Rollout, trained
Rollout, random
Knockout, trained
Knockout, random
Correlation with the null
c Attention heads
Random
Trained
Entropy / maximum
Layer
d Agreement with the generator's own effects
AKI stage ≥2, 48 h
Death, 24 h
Hypotension, 4 h
New IMV, 24 h
Rank correlation with the generator (median over anchors)
Editing
Integrated gradients
Attention × gradient
Attention rollout
Ceiling (split-half)
